## EXPERIENCE

### **theschoolofbitcoin.com - Speaker**

Speaker regarding the beneficial aspects of Bitcoin, Nodes, Self-Hosting and being a Sovereign Individual. ,

### **Deevnation.io - Speaker and Educator**

Instructed several classes on Bitcoin Node + Lightning setup and installation.

### **theschoolofbitcoin.com - Discord Admin (2022 - Now)**

An open project to build a dynamic consensus driven curriculum specifically for (de)financial literacy that has the ability to plug into any institution to support learners on problem and project based learning journeys.

### **kadena.io - Community Manager (2021 - Now)**

Kadena was founded on the idea that blockchain could revolutionize how the world interacts and transacts. But to get to mass adoption, chain technology and the ecosystem connecting it to the business world needed to be reimagined from the ground up. Our founders built a proprietary chain architecture and created the tools to make blockchain work for business – at speed, scale, and energy efficiency previously thought unachievable.

Contributions: <https://babening.io/>

### **handshake.org - Director Aus Relations (2020 - Now)**

Handshake is a decentralized, permissionless naming protocol where every peer is validating and in charge of managing the root DNS naming zone with the goal of creating an alternative to existing Certificate Authorities and naming systems. Names on the internet (top level domains, social networking handles, etc.) ultimately rely upon centralized actors with full control over a system which are relied upon to be honest, as they are vulnerable to hacking, censorship, and corruption. Handshake aims to experiment with new ways the internet can be more secure, resilient, and socially useful with a peer-to-peer system validated by the network's participants.
